I thought you would open this e-mail with the subject line.....anyway,

Emory Clinic gets a GI cocktail combo with the hyoscyamine sulfate. The drug we have in stock expires 6/1/12 and PCCA has it on back order until the end of the month. We looked at ordering the drops and it would be quite expensive (about \$600 for the hyoscyamine sulfate drops).
Do we want to use the expired drug or speak to the facility and have them switch to donnatol?
Michelle actually brought it up to me that the drug was expired.
